

GTM Signal-to-Pipeline

End-to-End Architecture · 8 Repos · 5 n8n Workflows

ARCHITECTURE · PAGE 1/4 · RASUL SHAIKH · 2026

OVERVIEW

Two signal paths converge into one send pipeline. QA gates before and after outbound.
Content loop compounds at the end. Signal in → enrich → score → personalize → list gate (B+) → n8n → Smartlead/HeyReach/HubSpot → weekly audit → mine calls → loop restarts.

8 PHASES

1. Capture Signal — LinkedIn engagers, funding, hiring (PhantomBuster, HeyReach, Trigify)
2. Enrich — Apollo, Clay, Prospeo, Deepline
3. Score & Route — gtm-ai-lead-scorer + founder-led-loop/02 → Hot/Warm/Nurture
4. Personalize — MiniMax hooks, 23 cadences, 60-col Omnibound Clay
5. Pre-Send Gate — list scorecard grade B+ required
6. Send — Smartlead + HeyReach + HubSpot via n8n
7. Post-Send Health — deliverability audit, 1% reply rule
8. Mine & Loop — content_miner.py → next post

Motion A — Omnibound Clay

60 Columns · Purple-Safe · 144 Email Variants

ARCHITECTURE · PAGE 2/4 · RASUL SHAIKH · 2026

CLAY FLOW

Inputs (6) → Intel (7-13) → Citation (14-26) → News (27-33) → Email waterfall (34-40) → Context+PS (41-47) → Persona (51) → Copy (52-59) → Validator (60 PASS only) → n8n push.

PURPLE SAFETY

Layer 1: extraction filters strip purple sentinel. Layer 2: copy guards return empty if fields missing. Layer 3: validator 12-check gate. Export filter: validator = PASS.

N8N

clay-push-pipeline.json — HMAC webhook, HubSpot upsert, tier routing to Smartlead/HeyReach.
retry-failed-pushes.json — cron 30min, retries from Google Sheet.

REPO

github.com/rasulshaikh/gtm-omnibound-clay-workflow

Motion B + C + n8n

Founder Loop · Cold Cadences · Orchestration

ARCHITECTURE · PAGE 3/4 · RASUL SHAIKH · 2026

FOUNDER-LED LOOP

Publish post → 01_signal_capture → enrich → 02_score_route (Hot 80+/Warm 50-79/Nurture <50)
→ 03_outbound MiniMax warm copy → calls → 04_content_miner → next post. Repo:
gtm-founder-led-loop

COLD CADENCES

23 YAML sequences: 8 signal, 7 persona, 4 vertical, 4 stage. cadence_runner.py +
MiniMax-Text-01 hooks. Repo: gtm-email-cadences

N8N ORCHESTRATION

1. pre-send-list-gate.json — blocks below grade B
2. clay-push-pipeline.json — tier routing
3. retry-failed-pushes.json — 30min cron
4. weekly-deliverability-audit.json — Monday SPF/DMARC + 1% rule
5. gtm-full-pipeline.json — master orchestrator

ALL 8 REPOS

Copy Map + QA Gates

Where Copy Lives · Pre/Post-Send Checks

ARCHITECTURE · PAGE 4/4 · RASUL SHAIKH · 2026

COPY LOCATIONS

Production sequences: Omnibound cols 52-59 (Claygent)
23 cadences: gtm-email-cadences/cadences/ (MiniMax hooks)
Warm outbound: founder-led-loop/03_outbound.py (MiniMax)
Single-lead: gtm-cold-email-personalizer (Claude+Playwright)
Scoring: gtm-ai-lead-scorer (Claude Haiku)
Formulas: gtm-clay-formula-library (6 IIFEs)

PRE-SEND GATE

gtm-list-quality-scorecard — 8 dimensions. Verification, duplicates, titles, catch-all, ICP fit, names. Grade B+ required. n8n pre-send-list-gate.json blocks bad lists.

POST-SEND HEALTH

gtm-deliverability-audit — SPF/DKIM/DMARC per domain. 1% reply rule after 200 sends. Bounce >3% flag. Weekly n8n cron → Slack.
